Project Design Phase-II
Data Flow Diagram & User Stories

Date	2 October 2026
Team ID	SWTID-2026-4524
Project Name	Implement Client Script & UI Policy (Incident)
Maximum Marks	4 Marks

Team Leader: Swathi R | Team Members: Sandhiya D, Sandhya Charlet Calista S, Mallemkonda Dallyjasmine | Team Size: 4

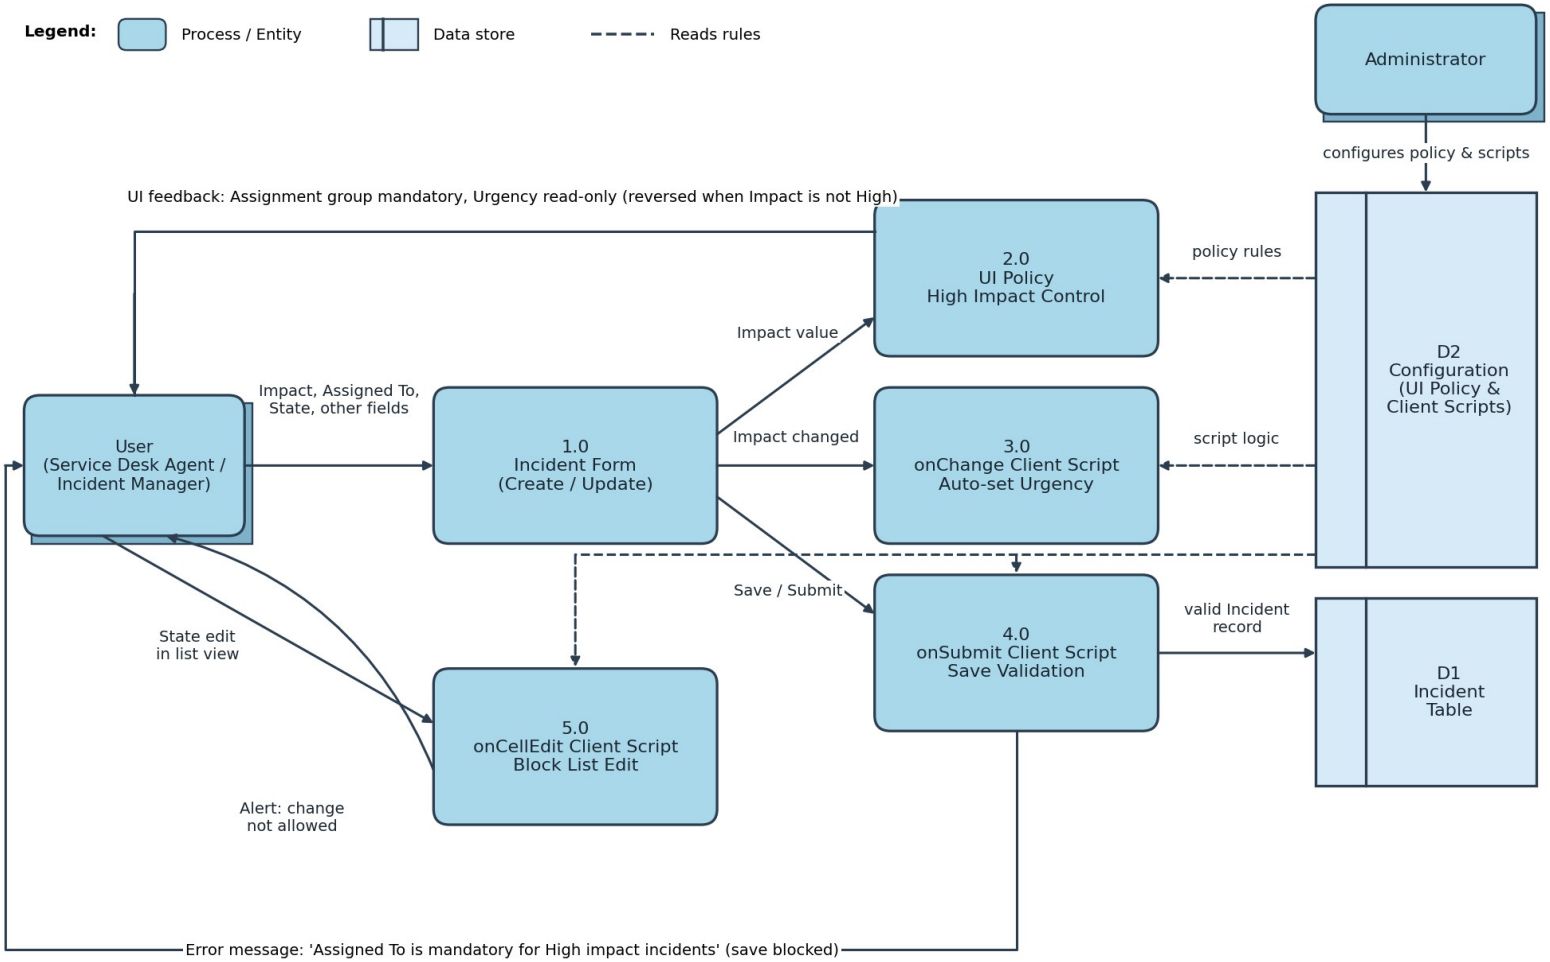

Data Flow Diagrams:

A Data Flow Diagram (DFD) is a traditional visual representation of the information flows within a system. A neat and clear DFD can depict the right amount of the system requirement graphically. It shows how data enters and leaves the system, what changes the information, and where data is stored.

Flow of the Implement Client Script & UI Policy (Incident) project:

1. The Administrator creates the UI Policy "High Impact Control" (Impact is 1 – High) and the three Client Scripts (onChange, onSubmit, onCellEdit) in ServiceNow. These are stored in the Configuration store (D2).
2. The User opens a new or existing Incident form and enters Impact, Assigned To, State and other details (Process 1.0).
3. The UI Policy (2.0) reads the Impact value. When Impact = High, Assignment group becomes mandatory and Urgency becomes read-only. Reverse if false undoes both when Impact is changed to another value.
4. The onChange Client Script (3.0) runs when Impact changes. For High impact it sets Urgency to 1 – High and shows the message "Urgency set to High for High impact incident."
5. When the User clicks Submit, the onSubmit Client Script (4.0) checks Impact and Assigned To. If Impact is High and Assigned To is empty, an error is shown and the save is blocked. Otherwise the valid record is stored in the Incident table (D1).
6. When the User tries to edit State directly in the Incident list, the onCellEdit Client Script (5.0) shows an alert and rejects the change. State can still be updated from the Incident form.

DFD Level 0: Implement Client Script & UI Policy (Incident)

User Stories

Use the below template to list all the user stories for the product.

User Type	Functional Requirement (Epic)	User Story Number	User Story / Task	Acceptance criteria	Priority	Release
Administrator	UI Policy	USN-1	As an administrator, I can create a UI Policy named "High Impact Control" on the Incident table with the condition Impact is 1 – High.	The policy is active and listed under System UI → UI Policies for the Incident table.	High	Sprint-1
Administrator	UI Policy	USN-2	As an administrator, I can make the Assignment group field mandatory when Impact is High.	Assignment group shows as mandatory on the Incident form when Impact = High.	High	Sprint-1
Administrator	UI Policy	USN-3	As an administrator, I can set Reverse if false to true so the policy changes are undone when the condition is not met.	When Impact changes from High to Medium, Assignment group is no longer mandatory and Urgency is editable.	High	Sprint-1
Administrator	UI Policy Action	USN-4	As an administrator, I can add a UI Policy Action that makes the Urgency field read-only when Impact is High.	Urgency stays visible but cannot be edited while Impact = High.	High	Sprint-1
Service Desk Agent	onChange Client Script	USN-5	As a service desk agent, when I set Impact to High, I want Urgency to be set to High automatically.	Urgency changes to 1 – High and the message "Urgency set to High for High impact incident." appears.	High	Sprint-2
Incident Manager	onSubmit Client Script (Save Validation)	USN-6	As an incident manager, I want the system to stop a High impact Incident from being saved when Assigned To is empty.	Save is blocked and an error appears on Assigned To. The record saves once Assigned To is filled.	High	Sprint-2
Incident Manager	onCellEdit Client Script	USN-7	As an incident manager, I want direct edits of State in the Incident list to be blocked.	An alert appears, the change is rejected and the State value remains unchanged.	Medium	Sprint-2
Service Desk Agent	Form-based Update	USN-8	As a service desk agent, I can update the State from the Incident form.	State change is saved with Update; Assigned To and Urgency still follow the UI Policy and Client Script rules.	Medium	Sprint-3
Tester	Testing	USN-9	As a tester, I can run the mandatory enforcement, successful save, reverse condition, list edit blocking and form update tests.	All five test activities give the expected results with no errors.	High	Sprint-3
