Ideation Phase

Empathize & Discover

Date	03 October 2026
Team ID	SWTID-2026-4524
Project Name	Implement Client Script & UI Policy (Incident)
Maximum Marks	4 Marks

Empathy Map Canvas:

An empathy map is used to understand the user's behaviours, attitudes, goals, and challenges. For this project, the empathy map focuses on the ServiceNow Incident User, which handles creating and updating incident records and needs a simple and consistent process to do so.

Customer / User:

ServiceNow Incident User responsible for creating and updating incident records.

Empathy Map – IT Procurement Team

THINK & FEEL

- Wants incident entry to be simple and clear.
- Wants required details to be entered correctly.
- Is concerned about incorrect or incomplete information.

HEAR

- Instructions from the incident management team.
- Details from users about incidents.
- Updates about incident status and resolution.

SEE

- Incident forms in ServiceNow.
- Required and optional fields.
- Different incident records entered by users.

SAY & DO

- Creates and updates incidents.
- Enters incident details.
- Checks incident information.
- Follows incident handling procedures.

PAIN

- Missing required details.
- Incorrect data entry.
- Manual checking.
- Delays in incident handling.

GAIN

- Required fields are clearly controlled.
- Correct field behavior.
- Better data accuracy.
- Reduced manual checking and easier incident handling.

Empathy Map Summary

The Incident User needs a simple and consistent way to create and update incident records. The main pain points are missing or incorrect details and manual checking, while the desired gains are better field control, improved data accuracy, and easier incident handling.
