Project Design Phase
Problem – Solution Fit Template

Date	2 October 2026
Team ID	SWTID-2026-4524
Project Name	Implement Client Script & UI Policy (Incident)
Maximum Marks	2 Marks

Team Leader: Swathi R | Team Members: Sandhiya D, Sandhya Charlet Calista S, Mallemkonda Dallyjasmine | Team Size: 4

Problem – Solution Fit Template:

The Problem-Solution Fit simply means that you have found a problem with your customer and that the solution you have realized for it actually solves the customer's problem. It helps entrepreneurs, marketers and corporate innovators identify behavioral patterns and recognize what would work and why

Purpose:

- Solve complex problems in a way that fits the state of your customers.
- Succeed faster and increase your solution adoption by tapping into existing mediums and channels of behavior.
- Sharpen your communication and marketing strategy with the right triggers and messaging.
- Increase touch-points with your company by finding the right problem-behavior fit and building trust by solving frequent annoyances, or urgent or costly problems.
- **Understand the existing situation in order to improve it for your target group.**

Template:

1. CUSTOMER SEGMENT(S) (CS)

Who is your customer?

- Service desk agents and incident managers who create and manage Incidents in ServiceNow
- ServiceNow administrators who configure the Incident form

6. CUSTOMER CONSTRAINTS (CC)

What constraints prevent customers from taking action?

- Rules can only be created by users with administrative or configuration access
- The solution must work inside the ServiceNow platform with no extra tools or budget
- It must stay lightweight and not slow down the Incident form
- Short duration micro project

5. AVAILABLE SOLUTIONS (AS)

Which solutions are available to customers today?

- User awareness and manual checks: flexible, but slow and prone to mistakes
- Manager review after submission: finds errors only after the record is saved
- Server-side rules (Business Rules / Data Policies): strong, but give no instant feedback on the form
- UI Policy and Client Scripts: instant feedback on the form, but client side only

2. JOBS-TO-BE-DONE / PROBLEMS (J&P)

Which jobs (or problems) do you address?

- Job: create complete, accurate Incidents so they are triaged, routed and resolved on time
- Problem: Assigned To or Assignment group left empty on High impact Incidents
- Problem: Urgency does not match a High Impact
- Problem: State changed directly in the list without checks

9. PROBLEM ROOT CAUSE (RC)

What is the real reason that this problem exists?

- Data entry depends only on user awareness and manual checks
- No rules are enforced on the form at the time of entry
- Impact and Urgency are not linked on the form
- Editing in the list view skips the form checks

7. BEHAVIOUR (BE)

What does your customer do to address the problem and get the job done?

- Agents fill only the fields they know and may save with key fields empty
- State is updated quickly from the list view
- Managers review and correct records after they are saved
- Reminders to fill the fields are given by email or by talking to the team

3. TRIGGERS (TR)

What triggers customers to act?

- An Incident is created or updated with Impact set to High
- The agent clicks Submit or Update to save the record
- A user edits State in the list view
- Wrong reports or missed SLAs caused by incomplete data

4. EMOTIONS: BEFORE / AFTER (EM)

How do customers feel when they face a problem?

- Before: confused and worried about missing data, rework and SLA breaches
- After: confident and in control, because the form guides them with clear messages

10. YOUR SOLUTION (SL)

A solution that fits within customer limitations, solves the problem and matches customer behaviour.

- UI Policy "High Impact Control": Assignment group becomes mandatory when Impact is High, with Reverse if false
- UI Policy Action: Urgency becomes read-only for High impact
- onChange Client Script: sets Urgency to High automatically and shows an info message
- onSubmit Client Script: blocks the save if Assigned To is empty for High impact
- onCellEdit Client Script: blocks State edits from the list view and shows an alert
- Rules are enforced on the form before the record is submitted, so Incidents are complete and consistent

8.1 ONLINE (CH)

What kind of actions do customers take online?

- Create and update Incidents on the ServiceNow Incident form and list
- Administrators configure rules in System UI → UI Policies and Client Scripts

8.2 OFFLINE (CH)

What kind of actions do customers take offline?

- Team discussions and verbal reminders to fill key fields
- Review meetings to check Incident data quality
